

VAIBHAV MANKAR

BI ANALYTICS ENGINEER

Pune, India | +91-7709867713 | vaibhavmankar57@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

BI Analytics Engineer specializing in Power BI, SQL, DAX and Python, with a track record of building production dashboards, automating large-scale data sourcing, and delivering IoT and computer-vision pipelines end-to-end. Combines an MBA with an Azure Databricks Data Engineer Associate certification to bridge technical delivery and business decision-making, and brings a builder's instinct for turning messy, ambiguous data problems into reliable, reusable systems.

KEY HIGHLIGHTS

- Shipped two production Power BI dashboards (healthcare warehouse operations + FMCG commercial analytics) from raw data to executive-ready KPIs in under 6 months.
- Built and maintained 40+ Python web scrapers powering an enterprise data-sourcing pipeline, cutting manual data collection out of the workflow entirely.
- Delivered outside core BI scope — real-time IoT geofencing APIs and a YOLO/OpenCV computer-vision pipeline — showing range across data, backend and applied ML.

TECHNICAL SKILLS

Business Intelligence: Power BI, DAX, Power Query, Data Modeling, KPI Dashboards, Data Validation & Reconciliation

Data & Databases: SQL, PostgreSQL, Excel, Pandas, Azure Databricks

Programming & Automation: Python, FastAPI, Playwright, Selenium, BeautifulSoup, Scrapy, Requests

IoT, Maps & Vision: MQTT, BLE, LoRaWAN, Leaflet, AWS EC2, OpenCV, YOLO

PROFESSIONAL EXPERIENCE

Associate Power BI Developer — Dataeaze, India

Mar 2025 – Present

- Power BI Dashboards:** Built an end-to-end healthcare warehouse dashboard covering inventory, storage utilization and product movement, exposing high/low-utilization areas to support inventory planning.
- Developed an FMCG analytics dashboard across products, customers, categories and time periods, surfacing top and underperforming products and profitable segments for management decisions.
- Delivered KPI cards, filters, drill-downs and trend analysis in SQL, Excel, Power Query and DAX; reconciled dashboard outputs against source data to ensure reporting accuracy.
- Automation & Data Engineering:** Designed and built 40+ Python scrapers (Playwright, Selenium, BeautifulSoup, Scrapy, Requests, Pandas) automating sourcing of supplier, product, part-number and compliance-certification data, with cleaning, validation, mapping and deduplication workflows and a status-tracking UI for long-running jobs.
- IoT & Geofencing:** Contributed to a real-time tracker-monitoring platform (Python, FastAPI, PostgreSQL, MQTT, BLE/LoRaWAN, AWS EC2), building geofencing logic, trail visualization, simulation APIs and Leaflet-based online/offline map views.
- Computer Vision:** Built a YOLO + OpenCV person-detection pipeline processing CCTV video at 20 FPS with batch, resumable inference for PPE-detection datasets, outputting sorted results and CSV reports.

CERTIFICATION

Databricks Certified Data Engineer Associate (Azure Databricks)

EDUCATION

MBA — Gondwana University

2019 – 2021 | CGPA: 9.4

BA — YCMOU University

2014 – 2017
